New Evolution Series E-4 Control Surface

A simplified version of our E-6 console, the E-4 has the following features:

- compact, cost-efficient networked control surface integrates with E-series network switch or E² IP audio network.
- E-series studio satellite provides local I/0
- each studio surface operates independently, yet can share ALL network sources and mixes
- alpha source displays above each fader
- pan, mode, and talkback for each channel
- integrated GUI on direct driven VGA with hi-res realtime graphic display metering
- surface includes event recall

- four main stereo output busses
- four mix-minus busses, each with TB
- dedicated control room and studio outputs
- headphone output
- programmable master panel switches for customized functions like phone, intercom, salvos or machine commands
- password protected setup screens
- available in 8, 12 or 16 channel mainframes
